

Package ‘pkgdepR’

November 19, 2024

Type Package

Title Statically Determine Function Dependencies Between Packages

Version 1.1.1

Maintainer Ed Peyton <edpeyton@gmail.com>

Description Statically determine and visualize the function dependencies within and across packages. This may be useful for managing function dependencies across a code base of multiple R packages.

all_info_ns*Get all information on a namespace***Description**

Get all information on a namespace

Usage

```
all_info_ns(ns)
```

Arguments

ns	A character representing the namespace to explore.
-----------	--

Value

A named list.

deps*Get environment dependency object***Description**

This function creates an object of class `pkgdepR`, representing the network of function calls between one or more packages.

Usage

```
deps(pkg, exported_only = FALSE)
```

Arguments

pkg	A character vector of the environments to explore. Should be on the search path. Cannot be base.
exported_only	Boolean. Whether to include non-exported functions.

Details

An object of class `pkgdepR` is a list with three named objects:

funs a data frame describing the functions. Contains columns `id`, `label`, `package`, `exported`, `group`, and `name`.

links a data frame containing the linkages between functions. Contains columns `from` and `to`.

pkg a character vector containing the packages explored.

Value

An object of class `pkgdepR`.

Examples

```
library(pkgdepR)
deps(pkg = "pkgdepR")
```

`get_functions` *Get functions from namespace*

Description

Get functions from namespace

Usage

```
get_functions(ns)
```

Arguments

`ns` A character representing the namespace to explore.

Value

A character vector of function names.

`is.pkgdepR` *pkgdepR object*

Description

An internal generic function. Methods for `is.pkgdepR` should only return TRUE if the class is `pkgdepR`.

Usage

```
is.pkgdepR(x)
```

Arguments

`x` Object to be tested.

Value

Boolean. TRUE when `x` is of class `pkgdepR`.

`ls_namespace_info` *Get namespace information*

Description

Get namespace information

Usage

```
ls_namespace_info(ns, ...)
```

Arguments

- | | |
|------------------|--|
| <code>ns</code> | A character representing the namespace to explore. |
| <code>...</code> | Other arguments passed to <code>ls</code> . |

Value

A character vector of the names to search for a given namespace.

`plot.pkgdepR` *Visualizing package dependencies*

Description

This function is a simple wrapper for plotting a network visualization using [visNetwork](#).

Usage

```
## S3 method for class 'pkgdepR'
plot(
  x,
  width = NULL,
  height = NULL,
  main = NULL,
  submain = NULL,
  alpha = 0.8,
  footer = NULL,
  background = "rgba(0, 0, 0, 0)",
  n,
  m,
  ...
)
```

Arguments

x	An object of class pkgdepR.
width	The width of the vis.js render.
height	The height of the vis.js render.
main	The title. To remove the title, pass list(text = NULL).
submain	The subtitle. To remove the subtitle, pass list(text = NULL).
alpha	A transparency value to use for colors. Must be between 0 and 1.
footer	A character or a named list. See visNetwork .
background	A background color. See visNetwork .
n	(Optional) The number of colours to request from viridis . Allows the user to set a more granular palette.
m	(Optional) The subset of colours of the custom palette (specified by n) to use in the plot.
...	Other arguments passed onto viridis .

Value

An object of classes [visNetwork](#) and [htmlwidget](#).

Examples

```
library(pkgdepR)
deps(pkg = "pkgdepR") %>% plot(option = "E", direction = -1)
deps(pkg = "pkgdepR") %>% plot(option = "D", alpha = 0.5, main = list(text = NULL))
deps(pkg = "pkgdepR") %>%
  plot(option = "D", alpha = 0.8, main = list(text = NULL)) %>%
  visNetwork::visInteraction(dragNodes = FALSE)
```

print.pkgdepR

Print pkgdepR object

Description

Print pkgdepR object

Usage

```
## S3 method for class 'pkgdepR'
print(x, ...)
```

Arguments

x	An object of class pkgdepR.
...	Redundant argument for consistency with method.

Value

No return value.

`summary.pkgdepR` *Summarise pkgdepR object*

Description

Summarise pkgdepR object

Usage

```
## S3 method for class 'pkgdepR'  
summary(object, ...)
```

Arguments

<code>object</code>	An object of class <code>pkgdepR</code> .
<code>...</code>	Redundant argument for consistency with method.

Value

No return value.

`%>%` *Imported `magrittr` forward-pipe operator*

Description

Imported from `magrittr`.
