--------------	----------

in2extRemes-package	<i>Graphical User Interface Dialog Window for EVA</i>
---------------------	---

Description

Open the main graphical user interface dialog window for extreme value analysis (EVA).

Usage

```
in2extRemes()
```

Details

This package provides point-and-click windows for performing extreme value analysis using the package **extRemes** version ≥ 2.0 .

The function `in2extRemes` is used to open the main dialog window from the command line.

Value

No value is returned. A GUI window is opened from which other functions can be called that might return various object types.

Examples

```
## Not run:  
in2extRemes()  
  
## End(Not run)
```

as.in2extRemesDataObject

Convert Data Frame Object to in2extRemes Data Object

Description

Convert a data frame, matrix or vector into an object readable by the `in2extRemes` windows.

Usage

```
as.in2extRemesDataObject(x)
```

Arguments

x data frame, matrix or numeric vector.

Details

Sets up a list object with a data component that contains the dataframe *x*, or if *x* is a matrix or vector, it is first converted to a data frame using `as.data.frame`. If *x* is a vector, an additional column, named “obs”, is added that contains an index of the row number. It is then given the class “in2extRemesDataObject” and returned.

Value

A list of class “in2extRemesDataObject” with component:

data *x* as a data frame.
