

# Package ‘DATAstudio’

March 17, 2025

**Version** 1.2

**Date** 2025-03-16

**Title** The Research Data Warehouse of Miguel de Carvalho

**Description** Pulls together a collection of datasets from Miguel de Carvalho research articles. Including, for example:

- de Carvalho (2012) <[doi:10.1016/j.jspi.2011.08.016](https://doi.org/10.1016/j.jspi.2011.08.016)>;
- de Carvalho et al (2012) <[doi:10.1080/03610926.2012.709905](https://doi.org/10.1080/03610926.2012.709905)>;
- de Carvalho et al (2012) <[doi:10.1016/j.econlet.2011.09.007](https://doi.org/10.1016/j.econlet.2011.09.007)>;
- de Carvalho and Davison (2014) <[doi:10.1080/01621459.2013.872651](https://doi.org/10.1080/01621459.2013.872651)>;
- de Carvalho and Rua (2017) <[doi:10.1016/j.ijforecast.2015.09.004](https://doi.org/10.1016/j.ijforecast.2015.09.004)>;

**Description**

**DATAstudio** is an add-on tool for R that pulls together a collection of datasets used in Miguel de Carvalho's research. For a complete list of datasets and documentation, type `help.start()` and follow the link to **DATAstudio** on the Package Index.

If you use data from this package in publications, please cite the package and the references provided below.

### Funding

Generative AI Lab (Univ. of Edinburgh). Royal Society of Edinburgh.

### Author(s)

Miguel de Carvalho; School of Mathematics, University of Edinburgh.

alps

*Swiss Alps Temperature Data*

---

### Description

The alps data data consist of daily winter temperature minima and maxima measured at 2m above ground surface at two sites in the Swiss Alps: Montana and Zermatt.

### Usage

alps

### Format

The alps data frame contains the following columns:

date Date of measurements.

min\_montana, min\_zermatt Daily minimum temperature in °C on Montana and Zermatt.

max\_montana, max\_zermatt Daily maximum temperature in °C on Montana and Zermatt.

### Source

MeteoSwiss

### References

Mhalla, L., de Carvalho, M., and Chavez-Demoulin, V. (2019) Regression type models for extremal dependence. *Scandinavian Journal of Statistics*, **46**, 1141-1167.

## Examples

```
## visualizing the data
data(alps)
oldpar <- par(pty = 's', mfrow = c(1, 2))
plot(alps$min_montana, alps$min_zermatt, pch = 20,
      xlab = "Montana", ylab = "Zermatt", main = "Daily Minimum")
plot(alps$max_montana, alps$max_zermatt, pch = 20,
      xlab = "Montana", ylab = "Zermatt", main = "Daily Maximum")
par(oldpar)

oldpar <- par(pty = 's', mfrow = c(1, 2))
plot(alps$min_montana, alps$max_montana, pch = 20,
      xlab = "Minimum", ylab = "Maximum", main = "Montana")
abline(a = 0, b = 1, col = "red", lty = 2)
plot(alps$min_zermatt, alps$max_zermatt, pch = 20,
      xlab = "Minimum", ylab = "Maximum", main = "Zermatt")
abline(a = 0, b = 1, col = "red", lty = 2)
par(oldpar)

## Not run:
## to download the NAO daily index in Mhalla et al (2019) use
## the R package data.table to access NOAA via ftp
link <- "ftp://ftp.cdc.noaa.gov/Public/gbates/teleconn/nao.reanalysis.t10trunc.1948-present.txt"

NAO.daily <- data.frame(NAO.daily)
colnames(NAO.daily) <- c("year", "month", "day", "NAO")

## End(Not run)
```

---

beatenberg

*Beatenberg Forest Temperature Data (In Unit Fréchet Scale)*

---

## Description

Preprocessed pairs of temperatures in unit Fréchet scale from Beatenberg forest, registered under forest cover and in the open field.

## Usage

```
beatenberg
```

## Format

The beatenberg data frame has 2839 rows and 2 columns: x (forest cover) and y (open field).

## Details

Preprocessing was conducted as described in Ferrez et al (2011), and for applications of this dataset within the context of extreme value theory see de Carvalho *et al.* (2013), de Carvalho and Davison (2014) as well as Castro and de Carvalho (2017).

- Ferrez, J., Davison, A. C., and Rebetez., M. (2011) Extreme temperature analysis under forest cover compared to an open field. *Agricultural and Forest Meteorology*, **151**, 992-1001.

## Examples

```
## de Carvalho et al (2013, Fig. 5)
data(beatenberg)
attach(beatenberg)
plot(x, y, log = "xy", pch = 20, xlab = "Forest Cover", ylab = "Open Field")

## Not run:
## install package extremis if not installed
if (!require("extremis")) install.packages("extremis")

## de Carvalho et al (2013, Fig. 7)
data(beatenberg)
fit <- bev.kernel(beatenberg, tau = 0.98, nu = 163, raw = FALSE)
plot(fit)
rug(fit$w)

## End(Not run)
```

---

brainwave

*Brainwave data*

---

## Description

The data contains the EEG power of two commonly-recognized types of EEG frequency bands: Y1 for alpha and Y2 for beta, for 30 participants and different covariates/stimulus. Column 3 to 8, represent the stimulus in the set: x1 for "mathematics", x2 for "relaxation", x3 for "music", x4 for "color", x5 for "video", x6 for "think and relax"). Column 9 represents the id of the participant, and column 10 contains the time in seconds.

## Usage

```
brainwave
```

## Format

The brainwave data frame has 7506 rows and 10 columns.

## References

---

brexit

*Brexit Poll Tracker*

---

## Description

The data consist of 267 polls conducted before the June 23 2016 EU referendum, which took place in the UK.

## Usage

brexit

## Format

A dataframe with 272 observations on six variables.

leave, stay, undecided Percentage in favor of each option.

date Date on which the poll was conducted.

pollster Institution conducting the poll.

size Number of polled subjects.

## Source

Financial Times (FT) Brexit poll tracker.

## References

## Examples

```
## Leave-stay plot (de Carvalho and Martos, 2018; Fig. 1)
data(brexit)
attach(brexit)
oldpar <- par(pty = "s")
plot(leave[(leave > stay)], stay[(leave > stay)],
     xlim = c(22, 66), ylim = c(22, 66), pch = 16, col = "red",
     xlab = "Leave", ylab = "Stay")
points(leave[(stay > leave)], stay[(stay > leave)],
       pch = 16, col = "blue")
points(leave[(stay == leave)], stay[(stay == leave)],
       pch = 24)
abline(a = 0, b = 1, lwd = 3)
par(oldpar)
```

---

`california`*California Fire Perimeters*

---

**Description**

The `california` data frame has 16577 rows and 2 columns. The first column contains the date, the second column gives the quantity of acres consumed by the flames.

**Usage**

```
data(california)
```

**Format**

This data frame contains the following columns:

**Date** A numeric vector of dates of wildfires.

**Acres** A numeric vector of thousands of acres consumed by the flames.

**Source**

California State Geportal.

---

`challenger`*Space Shuttle Challenger Data*

---

**Description**

Data on 23 flights of the space shuttle Challenger prior to the 1986 accident, wherein the shuttle blew up during takeoff.

**Usage**

```
challenger
```

**Format**

A dataframe with 23 observations on two variables, namely O-ring temperature (°F) and oring state (1 = failure; 0 = success).

## References

de Carvalho, M. (2012) A Generalization of the Solis–Wets method. *Journal of Statistical Planning and Inference*, **142**, 633-644.

## Examples

```
## Not run:
data(challenger)
ggplot(challenger, aes(x = as.factor(oring), y = temperature)) +
  geom_boxplot(fill = "steelblue", alpha = 0.3) +
  xlab("Failure") +
  ylab("Temperature (°F)") +
  theme_minimal()

## End(Not run)
```

---

claims

*Initial Claims of Unemployment*

---

## Description

Weekly number (in thousands) of unemployment insurance claims in the US from 7 Jan 1967 until 28 Nov 2009.

## Usage

```
claims
```

## Format

A time series with 515 observations; the object is of class `ts` (time-indexed series).

## Source

United States Department of Labor—Employment & Training Administration.

## References

de Carvalho, M., Turkman, K. F. and Rua, A. (2013) Dynamic threshold modelling and the US business cycle. *Journal of the Royal Statistical Society, Ser. C*, **62**, 535-550.

## See Also

<https://www.maths.ed.ac.uk/~mdecarv/decarvalho2013ash.html>

## Examples

```
## de Carvalho et al (2013; Fig 1)
data(claims)
plot(time(claims), claims, type = "l",
      xlab = "Time", ylab = "Initial Claims (in Thousands)")
```

---

cortical

*Brain Shape Data*

---

## Description

Axial brain slices gathered via magnetic resonance images (MRI) with 500 points on each outline, for 30 schizophrenia patients and 38 healthy controls.

## Usage

```
cortical
```

## Format

The cortical list has the following variables:

age Age, in years.

group Control patient (Con) or schizophrenia patient (Scz).

sex Male (1) or female (2).

symm Symmetry score obtained from raw 3D brain surface.

x and y Coordinates of slice from brain surface that intersects the AC (anterior commissure) and PC (posterior commissure).

cortical\%r 500 radii from angular polar coordinates.

## Details

The data were gathered from a neuroscience study conducted at the University of British Columbia, Canada, and documented in Brignell *et al.* (2010) and Martos and de Carvalho (2018). Each brain was registered into the so-called Talairach space so that brains can be compared on the same three-dimensional referential coordinate space.

## References

Brignell, C.J., Dryden, I.L., Gattone, S.A., Park, B., Leask, S., Browne, W.J., and Flynn, S. (2010) Surface shape analysis, with an application to brain surface asymmetry in schizophrenia. *Biostatistics*, **11**, 609-630.

Martos, G. and de Carvalho, M. (2018) Discrimination surfaces with application to region-specific brain asymmetry analysis. *Statistics in Medicine*, **37**, 1859-1873.

## Examples

```
## Martos and de Carvalho (2018; Fig 1 a)
library(scales)
data(cortical)
m <- 500
n <- 68
plot(cortical$r[,1] * cos(2 * pi * 1:m / m),
     cortical$r[,1] * sin(2 * pi * 1:m / m) , type = "l",
     col = alpha("gray", 1 / n), xlab = "z", ylab = "x")
for(i in 2:n)
lines(cortical$r[, i] * cos(2 * pi * 1:m / m),
     cortical$r[, i] * sin(2 * pi * 1:m / m), type = "l",
     col = alpha("gray", i / n))
```

---

dataset

*Load Dataset*

---

## Description

This function loads a dataset that is not included in the package due to space constraints on CRAN, but is available online from University of Edinburgh servers. It works similarly to the R command `data` from the `utils` package, except that it downloads the dataset.

## Usage

```
dataset(name)
```

## Arguments

`name` a string containing the link.

## Examples

```
## Download data
dataset("thefts")
head(thefts)
summary(thefts)
## for details on the dataset type
?thefts
```

---

`diabetes`*Diabetes Diagnosis Data*

---

**Description**

The diabetes data frame has 286 rows and 3 columns. The data were gathered from a population-based pilot survey of diabetes in Cairo, Egypt, in which postprandial blood glucose measurements were obtained from a fingerstick on 286 subjects. Based on the WHO (World Health Organization) criteria, 88 subjects were classified as diseased and 198 as healthy.

**Usage**`diabetes`**Format**

The diabetes data frame contains the following columns:

`marker` Postprandial blood glucose measurements (mg/dl) obtained from a fingerstick.

`status` Disease status, with 1 identifying subjects diagnosed with diabetes.

`age` Age in years.

**References**

Inácio de Carvalho, V., de Carvalho, M. and Branscum, A. (2017) Nonparametric Bayesian covariate-adjusted estimation of the Youden index. *Biometrics*, **73**, 1279-1288.

Inácio de Carvalho, V., Jara, A., Hanson, T. E. and de Carvalho, M. (2013) Bayesian nonparametric ROC regression modeling. *Bayesian Analysis*, **8**, 623-646.

**Examples**

```
data(diabetes)
plot(diabetes, pch = 20, main = "Diabetes Data")
```

---

`ecg200`*Electrocardiogram Data*

---

**Description**

The ecg data frame has 200 rows and 97 columns. The data is the result of monitoring electrical activity recorded during one heartbeat and it consists of 200 ECG signals sampled at 96 time instants, corresponding to 133 normal heartbeats and 67 myocardial infarction signals.

**Usage**`ecg200`

**Format**

The `ecg200` data frame contains the following columns:

`status` : status of the patient, where 1 identifies subjects with myocardial infarction signals, and 0 identifies subjects with normal heartbeats.

`i1 to i96` measurements at instants `i1 to i96`; to my knowledge the exact unit of time is unknown and is not specified by Olszewski (2001), who gathered the data.

  theme_minimal()

## End(Not run)
```

**Description**

Daily prices at close for FAANG stocks.

**Format**

The faang data frame has 545 rows and 6 columns.

**Details**

To load the file use the command `dataset("faang")`. FAANG is an acronym for popular tech stocks, namely (Meta's) Facebook, Apple, Amazon, Netflix, and (Alphabet's) Google. The data consist of prices at close for these stocks over 2012-2024. The data were gathered from Yahoo Finance.

**References**

```

---

fire

*Danish Fire Insurance Claims Database*

---

**Description**

The Danish Fire Insurance Claims Database includes 2167 industrial fire losses gathered from the Copenhagen Reinsurance Company over the period 1980-1990.

**Usage**

fire

**Format**

A dataframe with 2167 observations on five variables, namely:

Positions Date.  
building Loss to buildings.  
content Loss to content.  
profits Loss to profits.  
total Total loss.

## References

de Carvalho, M. and Marques, F. (2012) Jackknife Euclidean likelihood-based inference for Spearman's rho. *North American Actuarial Journal*, **16**, 487-492.

## Examples

```
data(fire)
attach(fire)
plot(building, contents, pch = 20, xlim = c(0, 95), ylim = c(0, 133),
      xlab = "Loss of Building", ylab = "Loss of Contents",
      main = "Danish Fire Insurance Claims")

## Not run:

```

---

GDPIP

*A Real-time Vintage of GDP and IP for the US Economy*

---

**Description**

US GDP (Gross Domestic Product) and IP (Industrial Production) ranging from from 1947 (Q1) to 2013 (Q4); the data correspond to a real-time vintage.

**Usage**

GDPIP

**Format**

A bivariate time series with 268 observations on two variables: GDP and IP. The object is of class `mts`.

**Source**

Federal Reserve Bank of Philadelphia.

```

---

hongkong

*Daily Maximum Temperature in Hong Kong*

---

**Description**

Daily Maximum Temperature Data from Hong Kong International Airport, Hong Kong, from January 1884 to October 2023.

**Usage**

```
hongkong
```

**Format**

The hongkong data frame has 48517 observations and 2 columns:

date : Year-month-day.

value : Daily maximum temperature (in degrees Celsius).

**Details**

Data on daily maximum temperatures with no missing values, with a total of 48517 observations.

**References**

de Carvalho, M., Huser, R., Naveau, P., and Reich, B. J. (2025, to appear). *Handbook on Statistics of Extremes*. Chapman & Hall/CRC. Boca Raton, FL.

---

hurricane

*Hurricane Tracking Data*

---

**Description**

Geographical coordinates, wind speed, and atmospheric pressure information for hurricanes from 1970 to 2011.

**Usage**

```
data(hurricane)
```

**Format**

The hurricane data frame has 43122 rows and 8 columns:

Year : Hurricane's year (ranging from 1971 to 2011).

Number : Year-specific hurricane identifier.

Name : Official name of the hurricane.

ISO\_Time : Recorded observation time.

Latitude : Recorded latitude of the measurement.

Longitude : Recorded longitude of the measurement.

Wind : Wind speed (in knots)

Pressure : Atmospheric pressure (millibars).

---

lisbon

*Rainfall Data from Lisbon, Portugal*

---

**Description**

Daily rainfall data from Lisbon, Portugal, from December 1863 to June 2018.

**Usage**

lisbon

**Format**

The lisbon data frame has 56503 observations and 2 columns:

yearmonth : year-month-day.

prec : total precipitation (mm).

**Details**

Prior to 1941, precipitation was measured for the 0-24 hour period; from 1941 onwards, precipitation was recorded from 9am to 9am the following day.

**Source**

IPMA (Instituto Português do Mar e da Atmosfera).

---

lungcancer

*Lung Cancer Diagnosis*

---

**Description**

The lungcancer data frame has 241 rows and 3 columns. The data were gathered from a case-control study, conducted at the Mayo Clinic in Rochester (Minnesota), which included 140 controls and 101 lung cancer cases; only woman have been enrolled in the study.

**Usage**

lungcancer

**Format**

This data frame contains the following columns:

marker : square root of sEGFR levels (soluble isoform of the epidermal growth factor receptor).

status : disease status, with 1 identifying lung cancer cases and 0 identifying controls.

pre : premenopausal indicator, with 1 identifying premenopausal women.

age : age in years.

---

madeira

*Rainfall Data from Madeira, Portugal*

---

**Description**

Rainfall data from Madeira, Portugal, from January 1973 to June 2018.

**Usage**

madeira

**Format**

The madeira data frame has 544 observations and 8 columns:

yearmonth Year and month.

prec Total monthly precipitation (0.01 inches).

amo Atlantic multi-decadal oscillation.

nino34 El Niño–Southern Oscillation (ENSO), expressed by the NINO3.4 index.

np North Pacific Index (NPI).

pdo Pacific Decadal Oscillation (PDO).

soi Southern Oscillation Index (SOI).

nao North Atlantic Oscillation (NAO).

**Details**

After eliminating the dry events (i.e., zero precipitation) and the missing precipitation data (two observations) one is left with a total of 532 observations, and that is the version of the data analyzed in de Carvalho et al (2022).

**Source**

National Oceanic and Atmospheric Administration.

---

marketsUS

*NASDAQ and NYSE Indices*

---

**Description**

Daily quotations at close of the NASDAQ and NYSE stock market indices from February 1971 till November 2021.

**Usage**

marketsUS

**Format**

The marketsUS data frame has 12562 rows and 3 columns: date and quotation at close of the nasdaq and nyse indices.

attach(merval)
head(merval, 3)
oldpar <- par(pty = 's')
plot(low, high, pch = 20)
abline(a = 0, b = 1, lty = 2, col = "gray")
par(oldpar)
```

---

metsynd

*Metabolic Syndrome Data*

---

**Description**

The metsynd data includes Gamma-Glutamyl Transferase (GGT) levels and curves of arterial oxygen saturation, for samples of women suffering from metabolic syndrome and women without metabolic syndrome; the data were gathered from a population-based survey conducted in Galicia (NW Spain), and it includes 35 women suffering from metabolic syndrome and 80 women without metabolic syndrome.

**Usage**

metsynd

**Format**

The data consist of a list with the following elements:

y0 GGT levels for women without metabolic syndrome.

y1 GGT levels for women suffering from metabolic syndrome.

X0 Curves of arterial oxygen saturation (%) for women without metabolic syndrome (X0\data, X0\$time).

X1 Curves of arterial oxygen saturation (%) for women suffering from metabolic syndrome (X1\data, X1\$time).

## Details

The curves of arterial oxygen saturation are included in the matrices  $X0\$data$  and  $X1\$data$ , with each row representing a patient, and with columns representing ordered measurements over time. Here  $X0\$time$  and  $X1\$time$  represents the time (in hours) at which measurements were made, i.e., every 20 seconds during three hours of sleep. Further details on these data can be found in the references below.

---

psa

*Prostate Cancer Diagnosis Data*

---

**Description**

Longitudinal measurements of two Prostate Specific Antigen (PSA)-based biomarkers for 71 prostate cancer cases and 70 controls.

**Usage**

`psa`

**Format**

The `psa` data frame has 683 rows and 6 columns:

`id` patient id.

`marker1` total PSA.

`marker2` ratio of free total PSA.

`status` disease status of each subject, with 1 identifying subjects diagnosed with prostate cancer.

`age` age in years.

`t` time prior to diagnosis.

**Details**

The data were gathered from the Beta-Carotene and Retinol Efficacy Trial (CARET)—a lung cancer prevention trial, conducted at the Fred Hutchinson Cancer Research Center. Further details on this study can be found in de Carvalho *et al.* (2020).

tmt	<i>Trail Making Test</i>
-----	--------------------------

---

**Description**

Completion times in seconds for TMT (Trail Making Test), part A, for 245 patients with Parkinson's disease, along with corresponding diagnostic on cognitive impairment.

**Usage**

```
tmt
```

**Format**

The `tmt` data frame has 245 rows and 2 columns:

`marker` completion times (in seconds)

`status` disease status of each subject, with 1, 2, and 3 respectively denoting patients diagnosed as unimpaired, mild cognitive impairment, and dementia.

---

wildfire	<i>Portugal Wildfire Data</i>
----------	-------------------------------

---

**Description**

The wildfire data from Portugal contains daily burnt area (in hectares) for wildfires in Portugal, and Canadian Forest Fire Weather Index System indices between 1980 to 2019.

**Usage**

wildfire

## Format

wildfire is a data frame with 14609 occurrences (rows) and 11 variables (columns).

The wildfire data frame contains the following columns:

Burnt\_Area : daily burnt area in hectares.

DSR : Daily Severity Rating (DSR), a numeric rating of the difficulty of controlling fires.

FWI : Fire Weather Index (FWI), a numeric rating of fire intensity.

BUI : Buildup Index (BUI), a numeric rating of the total amount of fuel available for combustion.

ISI : Initial Spread Index (ISI), a numeric rating of the expected rate of fire spread.

FFMC : Fine Fuel Moisture Code (FFMC), a numeric rating of the moisture content of litter and other cured fine fuels.

DMC : Duff Moisture Code (DMC), a numeric rating of the average moisture content of loosely compacted organic layers of moderate depth.

DC : Drought Code (DC), a rating of the average moisture content of deep, compact organic layers.

day, month, year : timestamp to date for each datapoints.
