

Package ‘properties’

October 14, 2022

Type Package

Title Parse 'Java' Properties Files for 'R Service Bus' Applications

Version 0.0-9

Date 2018-03-07

Author Tobias Verbeke, Daan Seynaeve, based on read.dcf by R Core Development Team

Maintainer Daan Seynaeve <daan.seynaeve@openanalytics.eu>

Description Allows to parse 'Java' properties files in the context of
'R Service Bus' applications.

URL <https://www.rservicebus.io/>

License GPL-2

Collate 'write.properties.R' 'read.properties.R'

RoxygenNote 6.0.1

NeedsCompilation no

Repository CRAN

--------------	----------

read.properties *Read a Java Properties File for Use in RSB Applications*

Description

Read a Java Properties File for Use in RSB Applications

Usage

```
read.properties(file, fields = NULL, encoding = "UTF-8")
```

Arguments

file	properties file, either a character string (path) or a connection
fields	subset of field names, if NULL, all fields are included
encoding	encoding of the properties file to read (default value "UTF-8")

Value

list with key-value pairs

Author(s)

Tobias Verbeke, Daan Seynaeve

See Also

[write.properties](#) for writing properties files

Examples

```
tf <- system.file("testFiles", "test0.properties", package = "properties")
read.properties(tf, fields = c("key2", "key3"))
```

write.properties *Write a Java Properties File*

Description

Write a Java Properties File

Usage

```
write.properties(file, properties, fields = NULL, encoding = "UTF-8")
```

Arguments

<code>file</code>	properties file, either a character string (path) or a connection
<code>properties</code>	list with key-value pairs
<code>fields</code>	subset of field names, if NULL, all fields are included
<code>encoding</code>	encoding of the properties file to read (default value "UTF-8")

Value

nothing; the properties are written to file

Author(s)

Daan Seynaeve

See Also

[read.properties](#) for reading properties files

Examples

```
tf <- tempfile()
write.properties(file = tf,
  properties = list(key1 = "value1", key2 = "value2", key3 = "value3"),
  fields = c("key2", "key3"))
unlink(tf)
```
