

Package ‘lar’

October 13, 2022

Type Package

Title History of labour relations package

Version 0.1-2

Date 2014-04-29

Description This package is intended for researchers studying historical labour relations (see <http://www.historyoflabourrelations.org>). The package allows for easy access of excel files in the standard defined by the Global Collaboratory on the History of Labour Relations. The package also allows for visualisation of labour relations according to the Collaboratory's format.

Imports data.table, grid, treemap, xlsx

License GPL-3

Labour Relations

Description

This package is intended for researchers studying historical labour relations (see <http://www.historyoflabourrelations.org>). The package allows for easy access of excel files in the standard defined by the Global Collaboratory on the History of Labour Relations. The package also allows for visualisation of labour relations according to the Collaboratory's format.

Details

Package: lar
Type: Package
Version: 0.1-2
Date: 2014-04-29
License: GPL-3

Author(s)

Richard L. Zijdemans <richard.zijdemans@iisg.nl>

References

Project website: <http://historyoflabourrelations.org>

Examples

```
## Not run:  
## First read in a labour relations formatted excel file:  
df <- read.lar("Spain_1900_(JMTL-Sept2011).xlsx")  
  
## Next, draw a treemap of the labour relations:  
draw.lar(df)  
  
## Treemap with example data set for Spain in 1900  
data(spain.1900)  
draw.lar(spain.1900)  
  
## End(Not run)
```

draw.lar	<i>Draw Labour Relations</i>
----------	------------------------------

Description

This function draws a treemap of labour relations (<http://historicallabourrelations.org>). It is a convenience wrapper for the Treemap package by Martijn Tennekens. Before this function is used, data should be setup in a specific data format (see `read.lar()`).

Usage

```
draw.lar(data.frame, sex)
```

Arguments

<code>data.frame</code>	A <code>data.frame</code> in labour relations format. Required. See <code>read.lar</code> for more information on the format.
<code>sex</code>	One of "total" (default), "male", "female", to indicate respectively: the total population, the male population or the female population.

Note

The creation of this package was made possible by the International Institute of Social History and research grants by the Gerda Henkel Stiftung and the Netherlands Organisation for Scientific Research (NWO).

Author(s)

Richard L. Zijdemans

See Also

[read.lar](#), [treemap](#).

Examples

```
## Not run:
## First read in a labour relations pre-defined excel file:
df <- read.lar("Spain_1900_(JMTL-Sept2011).xlsx")

## Next, draw a treemap of the labour relations:
draw.lar(df)

## Treemap with example data set for Spain in 1900
data(spain.1900)
```

```

draw.lar(spain.1900)

## Save treemap image as .png
data(spain.1900)
ppi <- 300 # define pixels: increase this number for even better quality
png(file = "tm_spain_1900.png",
     , width=10*ppi, height=8*ppi, res=ppi)
draw.lar(spain.1900)
dev.off()

## End(Not run)

```

labels

Labour Relation Taxonomy labels

Description

This dataset is for internal use of the lar package only. It attaches the official Labour Relations Taxonomy labels to data read in by the read.lar function.

Format

A data frame with 49 observations on the following 4 variables.

lr.cat a factor with levels -1 1 10 1012 11 12 12013 12013014 12013014018 12014 12014018 1201404 12015 1213 13 13012 13014 14 14012 14015 14018 142 143 15 16 17 171 172 18 181 182 183 2 3 4 4014 405 405012 5 5012014 5014 508014 5a 5b 6 7 7018 8 9

lr.txt.1 a factor with levels Commodified EitherOr Non working Reciprocal Tributary Unknown

lr.txt.2 a factor with levels Community EitherOr Household Market Non-market Unknown

lr.txt.3.ext a factor with levels Affluent (2) Cannot work (1) EitherOr Employers (13) Household Indent.lbr. (15) Indent.lbr. (9) Kin non-prod. (5b) Kin prod. (5) Kin prod. (5a) Leading prod. (4) Multiple Obligatory lbr. (8) Redist.lbr. (7) Self-Employed (12) Serfs (10) Serfs (16) Servants (6) Slaves (11) Slaves (17) Unemployed (3) Unknown Wage-Earners (14) Wage-Earners (18)

Details

Currently (lar package version 0.1), the labels still contain a label for label 5, but users should be aware that currently only labels 5a and 5b should be used.

read.lar	<i>Read in labour relations file (read.lar)</i>
----------	---

Description

The function read.lar() reads in a labour relations excel-input-file and attaches convenience labels for labour relations to be used with draw.lar().

Usage

```
read.lar(file)
```

Arguments

file An excel file (.xlsx) in labour relations input-format. Required.

Note

The creation of this package was made possible by the International Institute of Social History and research grants by the Gerda Henkel Stiftung and the Netherlands Organisation for Scientific Research (NWO).

Details

This dataset originates from the Labour Relations Collaboratory and specifically describes labour relations in Spain in 1900. The dataset and others in the project including full documentation and licenses are available from: <http://www.historyoflabourrelations.org>, hosted by the International Institute of Social History (<http://socialhistory.org>). The dataset is constructed by Professor José-Miguel Lana-Berasain who has kindly agreed for this dataset to be used in the `lar`-package. Use of the dataset is limited to the conditions specified at the Collaboratory website: <http://www.historyoflabourrelations.org>.
