

# Rox Samba Browser

A Rox app Samba/SMB(Windows) share browser.

\* Click on the scan icon to scan your network and create a new Rox app for each shared folder found. It will be a drive icon labeled "server name"--"share name".

\* Click on the drive icon that was created in the previous step to mount the share.

\* Right click on the drive icon to unmount the share.

\* Right click on the scan icon for some advanced options.

To start sharing files from this computer, go to Control Panel, click on the System tab, and then Manage Servers and Services. Click on samba and then click Start to run the service. Click enable if you want the Samba server to run at each boot . After you start the Samba server your Downloads folder will be shared on the network.
